

# Teamwork 4 – Report

**Team name:** OpsForge

*Team members: Mao Tamura (e2502119), Dominik Stiegler (e2502128), Dario Mathys (e2502127)*

GitLab : <https://gitlab.com/domi.stig/devops-opsforge/-/tree/main>

## **What we did today?**

Today, we worked together in our team session to define and document the use-cases for the project. This helped us gain a clearer understanding of the system requirements and how different actors will interact with the application.

In addition, we set up a GitLab repository to centralize our work and ensure proper version control. The repository now contains the most recent project files as well as all the current use-case diagrams, which can be found here: [Use-case diagrams](#)

At this stage, the diagrams represent our current understanding, but they may still evolve over time as new requirements emerge or existing ones are refined. We will continue to update and improve them throughout the project to keep the documentation consistent with the development process.
